#### **SECTION-I**

#### **INFORMATION TO APPLICANT**

### 1. INTRODUCTION

- a) NTPC Limited, a Govt. of India Enterprises, produces around 300 billion units of electricity annually through its cluster of gas, coal, hydro and RE based power stations of more than 67 GW capacity spanning across the country. Further NTPC plans targets RE capacity of 60 GW by 2032.
- b) In thermal power generation industry water is an important input. Consumptive use of water in a thermal generating unit mainly includes requirements of condenser cooling, ash disposal system, cycle make up water, FGD (Flue Gas Desulphurization) system, and Auxiliary cooling systems besides other miscellaneous requirements. Quantum of makeup water required for condenser cooling water system is the highest among all the consumptive requirements of any thermal generating power plant.
- c) In present scenario, many plants are facing issues related to water availability and water is getting scarce commodity day by day. Air cooled condensers are one such alternative in dry cooling technology.
- d) In view of future challenges with respect to availability of water NTPC may carry out project specific study for installation/ retrofitting of Air-Cooled Condenser (ACC) in its power plant.
- e) Typically, water consumption gets reduced by approximately 70% in case of dry cooling compared to water cooling condensers. In view of future challenges with respect to availability of water, NTPC is intending to explore vendor base for both new projects as well as retrofitting of Air-Cooled Condenser (ACC) in its power plant.
- f) Based on response in EOI, vendors capacity and capability, vendor base shall be prepared.
